OB3

37. (Amended) The device of claim 32[31] or 34[33] further comprising:
a variable resistive layer being proximate to one surface of said single electrode electroluminescent device, said variable resistive layer being comprised of conductive particles dispersed through a non-conductive medium;
a flexible electrode substantially covering a surface of said variable resistive layer;
said current source being a direct current source having one lead coupled to said transparent anode [single electrode] of said organic single electrode device and a second lead exposed at a surface of said flexible electrode so that a localized pressure gradient generated by a portion of a relief object contacting said flexible electrode forms a conducting path through said variable resistive layer which corresponds to said localized pressure gradient whereby said current flows from said direct current source and flexible electrode through said variable resistive layer to said single electrode of said organic single electrode electroluminescent device in correspondence with said localized pressure gradient to generate a light image of said relief object.

Applicant respectfully submits that the above amendments correct typographical errors in the claims. Examination of the amended claims is hereby requested.

Respectfully submitted,
